

RIBAG

Media release: Product innovation RAYM – Pure flexibility

The new RAYM downlight collection from RIBAG combines aesthetics with functionality and excellent lighting effects. Rotatable and swiveling, space-saving and extremely sustainable in energy consumption, it provides lighting planners, designers and architects with a professional and powerful lighting tool. Due to the intelligent lamp design, the module remains invisible even when pivoted and was awarded the Red Dot Award 2021, among others, for this.

The new downlight collection includes two high-intensity LED modules that can be rotated and pivoted. With high brilliance, colors, textures and materials are shown in the best light. Three different beam angles, from narrow to wide, enable effective accent lighting or large-area general lighting. RAYM is thus suitable not only for use in the home but also for prestigious lighting concepts in boutiques, medical practices, hotels or restaurants.

Technology

High-precision reflectors from the Bartenbach lighting laboratory form the heart of the downlights. They direct the light precisely to its destination. Optimum visual comfort is ensured by cleanly defined light cones on the one hand and perfect glare control on the other. The modules can be configured individually and can be mounted and adjusted quickly, easily and without tools.

Availability

RAYM is available from selected retailers, with mounting frames and rings in black or white and five different colored matt reflector terminations in black, white, chrome, copper or gold.
